OH, FOR A MAN.

Oh, for a man! the clear voice sang, And through the church the echo rang.

How could such sweetest pleasure find in't? The boys grinned across the aisles.

The deacon's frown was changed to smiles, The singer's cheer turned deepest pink.

At bass and tenor's wickered wink. The girls that bore the alto part Then took the strain with all their heart:

Oh, for a man, a man, a man, a man, And then the full voiced choir began.

To sing with all their might and main The strains to the girl's refrain:

Oh, for a mansion in the skies, A man—a mansion in the skies.

—A. C. Langford, in Judge.

A WONDERFUL CASE.

"I had been a medical student at R— about a year and two months," said a gray-haired doctor who sat on the park around the cabin stove.

"When I met with a singular adventure. It was forty years ago, and only a few lines concerning it were ever published in the Standard Journal in the same city, and although there was no law to that effect, as is the case now, all bodies of dead convicts not claimed by friends were turned over to me for the purpose of being sometimes happened, however, that we did not want them, as we drew from other localities, and the classes were much fewer in number than now. At that time, I had three or four subjects, and would not want any more for weeks.

"One day—it was in June—I received a note requesting me to call on a convict at the prison named James Harney. He was a man only 28 years of age, and had escaped the gallows by a scratch to be sentenced to solitary confinement for life. Judges still sentenced to the gallows, but it is well known that the sentence is not carried out. After a brief period in a dark cell the convict is set to work with the other prisoners and treated just the same. At that time, however, solitary confinement was a dungeon darker than midnight, with leave to walk in a corridor lighted by lamps half an hour every third day. Harney was a stout, robust fellow, with a countenance of a man who had been in prison for two years when he sent for me. Some influential friends of his had interceded with the Governor, and Harney himself had saved a hanging, and he had been put in a convict, and in consequence the terms of his sentence had been modified and mitigated. He was permitted to have the run of a corridor, an ordinary cell was allotted to him, and a part of the time he was allowed to go out, still in the dungeons. There was no possible chance for him to escape, and, as he had apparently resigned himself to his fate, no one suspected him of such an intention. I had not been to me on the excuse that he had some important matters to reveal regarding a robbery perpetrated on my father, then dead. I went to the prison supposing that was the convict's sole purpose in coming to me. I found him with an iron grating between us and a keeper sitting a few feet away to see that I did not pass in any article.

"Harney's boldness filled me with astonishment. He began by stating that he had heard I was an enthusiastic student of anatomy, and that I had written two or three articles for a medical magazine on the subject of suspended animation, and he proposed that I should examine him. This was a fact; but as they had been written and published after Harney's imprisonment, and as he was supposed to be dead to the world, I could not do so. He, however, had been acquainted with the fact. He put his proposition entirely on the ground of medical science, and it was no more nor less than that he should die and his body should be turned over to our college. He stipulated that his body should not go into the vat where the subjects are kept for twenty-four hours after they were received, and that I should perform the autopsy at once, and that the length of time was to be only a few days. He stated that he was able to fully comprehend his plans. He had discovered that he could die at will and return to life at any hour not over a day or two later. He stated that he had tried it successfully up to ten hours on several occasions, and felt sure that he could make the time twice or three times as long. A fellow named Saunders, who was in the cell while in this state had asserted that it was a perfect counterfeit of death, the heart ceasing its pulsations, the limbs growing cold and rigid, and the pulse being felt only at the heart. He expressed an enthusiasm in medical science to make his escape from a life sentence, and though I was at first firmly opposed to the idea he brought forward so many arguments, and he put them to me so keenly, that I was won over.

"Medical science must have dead bodies to secure benefits for the living," he said. "I will give you a demonstration of a medical theory you hold. You believe that human life can be temporarily suspended, and you have been ridiculed for your assertions. Here is the opportunity to prove your theory. You will die. All the doctors will pronounce me dead. You shall restore me to life. The case will make you famous."

"But your object is to escape from prison," I said.

"Granted. I killed an old man, who had only two or three years to live, any how. I have been shut up two years for it. It was my first and only crime. I have never been in prison since. Let me go out into the world and I shall be a good man under another name. The law will suppose me dead and be satisfied."

"I will overcome my fears and scruples and I agreed to his plans, but we were baffled at the very outset by the fact that vacation was coming on, while the college had more subjects than it needed. This was June, you may remember, and it was not until near October before Harney's plan could be carried out. We could safely figure in this case the same as in all others. The prison doctor was an old fellow named Saunders, and he was through politics. It was well-known among the medical fraternity that he was stupid and ignorant, and that the patients who took his doses were as likely to die as to recover. He was a violent disease, which he could not be expected to cure, and consumption, lung fever, and nearly every thing else went down in his reports as 'The cold fever—bad case.' It was his rule to get the body out of the way as soon as possible. If a convict died in the morning he was buried in the afternoon, or his body sent to the college in the evening. If he died about dusk his body was disposed of before midnight.

"Convicts are useless creatures after the breath leaves 'em," he said to me on one occasion, "and keeping a corpse around here kinder discourages the living."

"When I informed Harney that it would be three months before our plans

could be attempted he grew desperate. He felt certain in his own mind that we should achieve success, and the idea of delay made him reckless. The prison graveyard was then a part of the city, and at least a few hours separated only by a fence, a dead convict was lifted into a pine coffin, the lid screwed down, and two men with a one horse wagon drove to the graveyard and dumped the box into a three-foot hole, and filled the hole up. There was no ceremony and no feeling. I knew all these facts, for I had seen several burials, but how Harney could know them was a puzzle to me until I learned that he was a very clever man and a jail awaiting sentence. He now proposed that he should die and be buried, and that I should dig him up and carry him off, and wait for life to come. This he would do, and I would not give him an answer until I had found a fellow enthusiast who entered into the plot with great alacrity. We rented a room, arranged for a horse and wagon, and provided ourselves with an electric battery, various restoratives, wine, and food, and on the afternoon of the 21st day of June I promised Harney that he would be ready by the following night. He was greatly elated, and assured me that if there was any hitch in the program it would not be his fault. When I left him I went to the doctor's office in the prison, and after a few moments' conversation he said: "Well, doctor, is there much sickness?" "No, not much."

"We shan't want any more cadavers before October."

"I was just talking with Harney—No. 310. He's looking powerful, but I predict that he won't live a month."

"Harney! O, yes. I was noticing him the other day. Got all the points tied, he has, and he may drop off any day."

"Well, doctor, give him a decent burial, doctor, good-bye."

"I had scored a point for my men. The doctor was prepared for his death, and would make the usual record. This was what happened at the prison after the doctor was informed that Harney was ill, and he went in to see him and found him feverish and highly, with his pulse very weak."

"Every day, for Harney," said the old quack, after making a brief examination, "but I'm afraid you are going to be a very sick man."

"Yes, I think so, doctor."

"I've got all the symptoms of typhoid, if the disease gets a good grip on you it will be a hard job to pull you through."

"Doctor, it's no use," whispered Harney. "If anybody can save me you can. I've got all the points tied, and I've had a short time to live. I've had trouble with my heart for a long time, and I feel as if I was gradually going to pieces."

"I'll tell you in some powder and perhaps you'll brace up; but, to be honest with you, I think your hours are numbered."

"Next morning Harney was much worse, and the doctor, up all hopes, sent the chaplain to see the dying man. Harney was very penitent, and when the good man left him it was with the firm conviction that the dying convict had truly repented of his sins. The next afternoon the hall master reported to the doctor:

"No. 310 is dead in his cell, sir."

"O, is he? Well, those that can't live must die. I have to get the body ready for the morgue. Have the body put in a coffin and carried to the dead-house, and it had better be buried as soon as night comes."

"Isn't it to go to the college?"

"No, they don't need any more just now."

IN THE REICHSRAT.

HOW SOME PROMINENT GERMAN STATESMEN ACT AND LOOK.

Bismarck, Richter, Von Moltke and Windthorst in Attitudes That Are Characteristic—The Anniversary of Emperor William's Birth.

The boys of 1840-50 have long since had to learn their European geography anew. A map of date before our eyes is as obsolete as...

Bismarck in the Reichsrat. He started the system. There were a few called the German Bund—a sort of general parliament called the Bund...

This history is so recent and so brilliant that we cannot even now appreciate the wonder and practical importance of a united Italy and a consolidated Germany.

EBEN F. PHILLIBURY. A prominent New England politician. Twenty years ago the name of Eben F. Philibury was very well known throughout the country...

A FIGURE IN HISTORY. Ex-Governor William Smith, of Virginia. The newspapers have lately contained brief notes to the effect that ex-Governor Smith, of Virginia, is stricken with a fatal illness...

WINDTHORST TAKING NOTES. Alcazar and Lorraine, which France had taken from Germany in 1871, were annexed to Prussia, and on Jan. 18, 1871, King William, victorious from the beginning of the war, was proclaimed emperor of Germany at Versailles...

WINDTHORST TAKING NOTES. The Reichstag convened March 5 and at once adopted declarations in favor of peace. The venerable Von Moltke was long and loudly cheered as he took his seat among the extreme supporters of Bismarck and the septennate.

FOUR GENERATIONS. This week the whole German nation is celebrating the nineteenth birthday of the Emperor William. The last illustration of the accompanying article is the famous photograph of the four living generations of the German royal family.

A FADING LANDMARK.

The Madison Square Garden to be Torn Down.

The old historic Madison Square Garden mansion, which belonged to an early line of press and is now a relic of the past, is to be razed to the ground.

MADISON SQUARE GARDEN. The ground on which the long, low, irregular building stands was purchased in 1812 by the city of New York.

The purchasers are a number of New Yorkers who have formed a company whose intention is to build on the ground now occupied by the garden a large permanent exhibition building.
