longer-your enemies are routed." "My enemies?" repeated Rahadoor's

widow, looking up curiously. "Yes, the miserable Brahmans, who would have cruelly burned you on old Rahadoor's funeral pile but for the timely interference of the English."

"Oh, but they are not my enemiesfrom the pile, upon a knoll, loomed up they are my friends, who were only doing their duty-and I was ready to die," she added slowly. "There," said the major, pointing to

"But do you not know that the Engthe crumbling structure, "is an excellish have a treaty with your princes lent place for me to conceal my men till abolishing the suttee?" pursued the offithe moment for action comes. Meanwhile we must surprise these fanatics.

Natalie shook her head. who would doubtless be highly delight-

ed to be able to inform the people of El-"Yet it is true. So your own people were deceiving you. You have the right lora of our presence and so thwart our to live." purpose. The rascals, overcome by their

"Ah," said the young woman sweetly, a bright light coming into her dark eyes, "I really have the right to live?"

"Undoubtedly. Are you not glad?" "I-I don't know," stammered . Na-

talie, something like a shadow of fear The order was easily executed, for darkening her lovely face. "My people the fanatics were asleep, as the major will curse me, and when I return to had surmised, and were disarmed and them, if they have deceived me, as you say, will they not carry out the ceremony when you are gone and they need

no longer fear your intervention?" "They can never carry out the cere-

mony, little Natalie," returned the ma-"I have taken my precautions. jor. Look!" And he pointed toward a large opening in the crumbling walls, through which one could see a dense volume of smoke rising in great clouds far into the

sky. "You see," he continued, "you have nothing more to fear there. By my orders old Rahadoor is having a funeral all by himself. And as for you, little Natalie, no harm shall come to you. You ly caparisoned elephant, upon whose shall be protected. You shall not go back sat a young woman clad in white back to your people. Put your trust in me."

This was the hapless suttee, old Ra-Natalie fixed her beautiful eyes on the hadoor's widow. And not only was she animated face above; then she said simvery young-apparently not over 16but she was very beautiful, a truly ravply:

"I trust you-indeed I do, for you are ishing creature. The severe fast which the Brahman priests imposed upon the the only man I have ever dared to speak to without trembling for fear. And yet suttee had not perceptibly marred her I have always been taught to hate your beauty. Her black eyes, though dimmed people." by suffering, had not lost all their lus-

Here the tete-a-tete was interrupted ter, and her pale face wore an indescribby the appearance of Punjo, who brought with him the garments that Natalie had

> Twelve days have come and gone since the return to the camp at the foot of the Western Ghauts. A courier had been dispatched to the English authorities in Calcutta with the major's report of the rescue of the young widow, who had adapted herself to her new life in the camp with evident joy, which Major Ralph Cleveland seemed to share won-

It was a little after midnight. The stars shone in a clear sky; the camp was wrapped in a silence, broken at intervals by the cries of the sentries. Along its western limit ran a jungle, from which rose here and there a gigantic catalpa tree.

yards of the first tents and but a few fro from time to time, crouched a naked Hindoo, listening to the sentry's retreat-

charged me to tell you that he protect you from them"--"I hate him and the rest of the priests

now that my eyes are open to their perfidy. I shall not return to them!" said Natalie. "Ah, you, a woman, dare defy the

priests!" hissed the spy. "Hark you, woman! Go with me you shall in spite of yourself! Punjo has not risked his life for nothing"-----A heavy hand fell upon the speaker's neck, there was a loud report, and the

Hindoo, bounding backward, fell in a heap at the entrance to the tent. Natalie, terrified, flung herself at the major's feet, and clasping his knees tightly with her soft, round arms cried

ont: "Oh. I know von even in the dark! You have saved Natalie once more! Natalie shall be your slave-your willing

slave!" Stooping quickly, the major lifted her trembling form in his strong arms and said in a solemn voice:

"No, not my slave, sweet little Natalie, but my wife-in England!"-Dudley Winthrop Moore in Washington Post.

An Odd Cure For Fainting.

In The Law Times some interesting stories are told of the late Baron Parke, afterward Lord Wensleydale. His love of the law is illustrated by the anecdote of his apologizing to a hostess for his late arrival at a party on the ground that he could not tear himself away from "a beautiful demurrer." His passion for fresh air was such that on buying a handsomely furnished house his first order, it is said, was that all the bedposts should be sawed down and the next that all the bed curtains should be burned. At Exeter he insisted on ventilation in a wholesale way which wrought

havoc with counsel and juries. The best story of Baron Parke is perhaps that which tells how once when summoned to advise the lords he was seized with a fainting fit in the middle of his argument. Various remedies were applied without avail. At last a happy thought occurred to one of his brethren, who well knew his peculiar temperament. He rushed into the library, seized a large musty volume of old statutes, rushed back and held it to the nostrils of the patient. The effect was marvelous. He at once opened his eyes, gave them a slight rub and in a few seconds was as well as ever.

Buffon's Laziness. Buffon rose always with the sun, and he used often to tell by what means he had accustomed himself to get out of bed so early. "In my youth," said he, "I was very fond of sleep. It robbed me of a great deal of my time, but my poor Joseph (his domestic) was of great service in enabling me to overcome it.] promised to give Joseph a crown every time that he could make me get up at 6 "The next morning he did not fail to awake and torment me, Lut he received only abuse. The day after he did the same, with no better success, and I was obliged at noon to confess that I had lost my time. I told him that he did not know how to manage his business: that he ought to think of my promise and not to mind my threats. The day following he employed force, and I begged for indulgence, I bid him begone, I stormed,

but Joseph persisted. I was therefore obliged to comply, and he was rewarded every day for the abuse which he suffered at the moment when I awoke by thanks, accompanied with a crown, which he received about an hour after Yes, I am indebted to poor Joseph for

those days of card playing and robbery on the river made Uncle Billy unpopular with the dishonest gamblers who infested many of the river towns and swarmed upon the steamers that plied the waters. But the old fellow's prowess and strength were too well known to precipitate a personal encounter between him and the pasteboard fraternity. Several years after Russel had abandoned the flatboat for the swifter moving steamer he was temporarily in command of a large steamboat on its up trip, because of the illness of the captain, who had remained at New Orleans. One night the boat was compelled to tie up at Natchez, "under the hill," and wait for morning to resume its trip. A number of passengers went on shore and visited the dancehouses and gambling dens that were doing a thriving business in their line.

Among the crowd was a man named Hall, who had taken a flatboat of produce south, sold out his boat and cargo at a big profit and was returning to his home near Cincinnati with the proceeds of his sale. He entered a notorious house that stood on the bank overlooking the river, more through curiosity than the desire to game. The place was frequented by the lowest class of gamblers and desperate characters. Hall foolishly displayed his money and was at once attacked, brutally beaten and robbed of every cent and then thrown out of the building in an almost dying condition, where he was found and carried back to the boat by friendly hands. Russel enigma of science known as vitality.learned of the affair, and getting from Paris Journal. the lips of the suffering victim all the particulars of the outrage he went on shore early in the morning, and going to the house demanded of the proprietor the return of all the stolen money. The half drunken ruffian laughed at the request, and his saloon being crowded with a gang of fellows who would mur-

der a man for a drink of whisky the proprietor threatened the captain that if he didn't leave the place immediately they would throw him out and treat him as they had his friend.

"I'll go," said the enraged officer, "but your infamous den will go with me. [:]

Proceeding to the boat that was waiting his orders to pull out, he directed the deckhands to get the largest cable on the steamer and follow him with sufficient weapons for a fight. Leading the way to the house, a two story frame building, the cable was passed around it and then in and out of some of the windows and made fast. In the upper room were a number of gamblers, too busy to combat the river men or see what they were doing. The proprietor was down stairs passing over the liquor to the crowd of half drunken and thirsty customers and did not comprehend what was going on until the huge rope had securely encircled his house. As a throng of spectators raised a cheer Russel sprang on his boat and shouted out to the pilot, "Go ahead!" and to the engineer, "Let her go!" The boat began to move, the rope be-

world.' gan to tighten, the house began to creak, the inmates began to tremble, and the sound of tearing timber and the oaths of frightened men commingled. The gamblers rushed from the tables, the drunken revelers about the bar left their liquor untasted and sprang from the saloon. The astonished proprietor pulled a pistol, and swearing he would shoot the author of all this commotion rushed through his doorway just as the swaying and creaking building yielded to the mighty pull and toppled over with a tremendous crash. The next instant the surging boat dragged it into the river. The cable was then unloosened and the steamer continued its course amid the cheers of an approving crowd and the yells and curses of the disappointed and enraged proprietor, who swore he would kill the daring Russel on his return trip.

ing pain came on, caused, as he sup posed, by the sudden reaction in the tis sues. In experimenting on other animals he found that the lower the organism the better it seemed to resist cold. Fishes could be frozen hard without losing vitality. If the temperature to which they were exposed did not sink below the Fahrenheit zero, and if the experiment did not last too long, they could be thawed out, apparently without in jury. Frogs could be kept for a time in temperature 20 degrees below the Fahrenheit zero without harm, but they succumbed to a temperature of 30 de grees below. Snakes bore about the same degree of cold, and centipeds did not seem to be inconvenienced by a temperature of 60 below. Snails were still more hardy, suffering no loss of vitality in a well at a temperature 184

egrees below zero. This astonishing fortitude was, how ever, far surpassed by that of certain microbes, which M. Pictet froze up in a block of solidified atmospheric air at a temperature 350 degrees below the Fahrenheit zero. In this block, hard and solid as crystal, he kept them for some time, and then thawed them out gently, upon which they exhibited their usual activity. What can be the nature of a circulation which is indifferent to this awful cold or of an organism in which circulation can be entirely stopped with out injury we can only conjecture, but M. Pictet's experiments have certainly added another mystery to that standing

The Stormiest Region. In reply to the query of which is the stormiest region of the ocean Pearson's Weekly says: "Taking the question in the ordinary sense of the words, this evil distinction must be given to the region lying about Cape Horn, or Cape Smoke, as it is aptly and with good reason called by mariners. It is true that no storms so violent as the hurricanes of the West Indies, the cyclones of the North American Atlantic coast or the typhoons of the China seas are to be met with here.

"But, on the other hand, the waters of Cape Horn have never been unvisited by storms for more than a week or two at a stretch within the memory of man Standing on the outpost of the world, Cape Horn is the meeting place of ocean currents of very different temperatures from the icy cold waters of the Antarctic drift to the warmth of the Brazil and Peruvian return currents. The prevailing winds are from the northwest and west, and these coming from the warm regions of the Pacific condense into the fogs which sailors call 'Cape Horn blankets' and which are the sure forerunners of storms. The extremely low level to which the glaciers of Terra del Fuego descend, the perpetual congelation of the subsoil, the meeting of conflicting winds of very different temperatures, are all direct or indirect causes combining to make this the most constantly stormy region of the

> A Bonaparte Letter. An Italian newspaper publishes the ollowing characteristic letter from the

conqueror of Marengo and Austerlitz to the celebrated actor Talma: "I have fought like a lion for the republic, my good Talma, and now she rewards me by letting me starve. I am at the end of my resources. That wretched Aubrev leaves me in the streets when he could very well do something for me. I feel capable of accomplishing more than the Generals Santerre and Rossignol, and there is not a soul to employ me. You are fortunate! Your fame does not depend on any one. Two hours passed on the stage puts you in the presence of

road tracks in the south end of the city inst in time to save him from being mangled. It was then discovered that he had been beaten almost to death. He was carried to the Grady hospital, and when he recovered physically it was found that his mind was a perfect blank as to past events—so much so that he

even did not know his own name. Finally under the care of the surgeons there came back inklings of the past, and one day last week he electrified everybody about the hospital by rushing about and declaring he "had it." He had caught what he said was his last name. He was taken by detectives up into North Carolina. and at Culberson, near Murphy, he found friends, but he was not Draughn. at least not there. He had been known there as Dr. F. D. Heath and had lived there for several months last summer but Heath and Draughn are one and the same man, and it developed that under the former name he has three living wives. One lives in Salem, No. 2 in Asheville and No. 3 in Bryson City. Va. His mother, Mrs. Frank Barr, the wife of a printer, also lives near Salem. He will be prosecuted for bigamy and is very sorry he has found out who he is. -Atlanta Cor. St. Louis Republic.

A Loaded Farm.

For many years a sandy mound on the H. A. Maize farm, just south of this city, has been known as the hiding place of the fox. This winter the animals have been unusually numerous and created havoc in the henneries. The losses became so great that the farmers held a meeting and decided to blow up the mound and rid themselves of the pests. A large quantity of dynamite was purchased, and four large charges were put into the ground. For some reason the fuses failed to discharge the explosive, and the stuff is now buried in the mound. The mound is one of the most productive spots on the farm, and as the farmer does not know just where the dynamite lies he is in a pickle to know what to do. as he is afraid to dig into the mound for fear he may strike the stuff and send himself to kingdom come. The owner of the farm insists that the dynamite must be found, as he realizes that the fact of it being buried on the farm is going to hurt the sale of the farm or forever render several acres of his best land valueless.—Wooster (O.) Dispatch.

Hot In Australia.

The weather in Australia during the antipodean summer has been unusually hot and oppressive. In Adelaide during January the thermometer several times registered over 100 degrees in the shade. and one day it climbed to 107 in the shade and 163 in the sun. In Melbourne the 100 notch has been reached more than once, and the scorching north winds have made the atmosphere exceedingly oppressive. The foregoing figures are from weather observatory readings, and probably do not represent by several degrees the temperature of the city streets .--Melbourne Letter.

What She Feared.

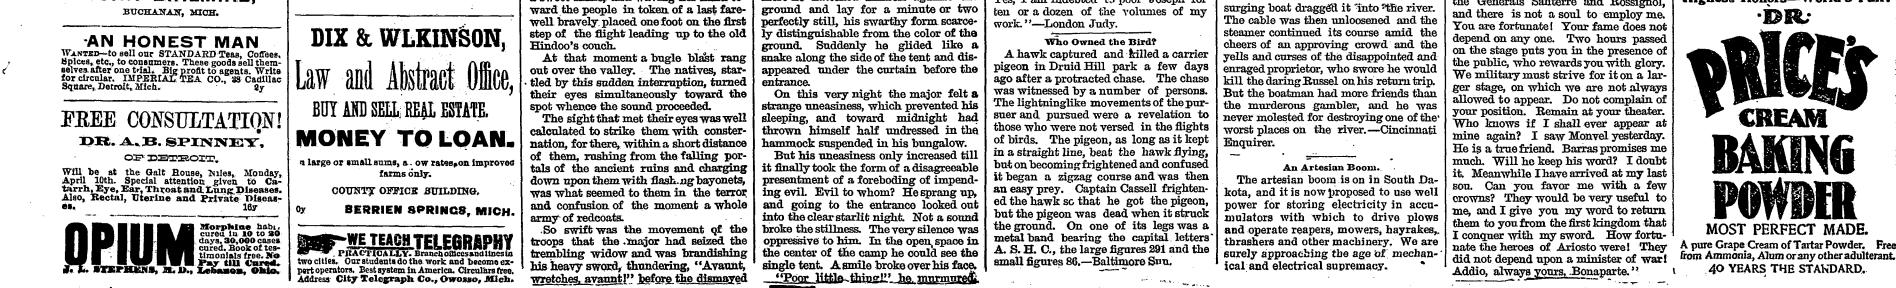

Fannie-I am dreadfully nervous Mr. Charlie Bondclipper is going to call on papa this afternoon to ask for my hand.

Jennie-Are you afraid your father will refuse?

Fannie-No. Father is all right. Jennie-Then what are you nervous

about? Fannie-I'm afraid Charlie will not show up.-London Tit-Bits.

Awarded Highest Honors-World's Fair.

ed, a hush came over the multitude, and a handsome young priest, stepping from the ranks of his colleagues, walked backward to where the elephant had stopped and spoke to the young woman. She started at the sound of his voice, as if from a dream, rose, looked about her a moment in confusion, then descended the short ladder placed against When she reached the ground, the derfully. young priest took her gently by the arm

glossy waves to her feet, leaving her finally standing there, abashed and be-

Behind one of these trees, within 25 steps from where a sentry passed to and ing footsteps. When all was silent, the skulker dropped upon his hands and knees and crept with great caution to

the verge of the jungle, where he put his ear to the ground. Then he crept on, swiftly and noiselessly, toward the center of the camp, stopping ever and anon to listen, until he reached a tent standing in an open space apart from the rest. Here he flattened himself against the

women, who began to strip her of her jewels and outer garments and loosened her luxuriant black hair, which fell in

wildered, with nothing to cover her nakedness but a thin silken undergarment. Then the young priest once more approached her and conducted her to the

pile amid the shouts of the people and howls of the fanatics, who in their religious exaltation began to slash their naked bodies with knives. At the foot of the pyre a hoary Brahman held out to her a lighted torch, with which she was to set fire to the great heap before stretching herself by the side of her husband's body. Rahadoor's widow took the torch, with

a sweet smile, and waving her hand to-

seized before they could think of offering any resistance. The next step was to secrete the regiment in the immense ruins. Dawn was beginning to show itself along the horizon when there came to the ears of the eager watchers a sound as of faroff clamor. "It is they," said the spy. Led by a hundred Brahman priests in their robes of ceremony, their shaven heads uncovered, some carrying flaming torches, the natives slowly advanced, the air echoing with their acclamations. In their midst, surrounded by a crowd of howling fanatics, plodded a gorgeous-

religious frenzy and vigil, are probably

fast asleep, and so will fall into our

hands without bloodshed. Go cautiously

forward, Punjo, with my men and se-

and covered with sparkling gems.

cure them."

BUCHANAN RECORD. Koenigshoff, Fred Vetter and Joseph

JOHN G. HOLMES, Editor.

THURSDAY, APRIL 5, 1894.

The state whisky business has brought on a small-sized civil war. in South Carolina.

Congressman Conn sees the handwriting, and very discretely declines a renomination. Republicans will be more numerous in the next Congress.

Prominent democrats in all parts of the state are fleeing from that party of distruction like rats from a burning building. One year of practical experience with the party in full control of the government fully satisfies them.

To Congressman Breckenridge; Greeting: Do your country your greatest service by resigning from Congress and seeking a life-long home for yourself in the seclusion of the Dismal swamp. It is the only earthly place

President Cleveland returned what is known as the Seigiorage coinage bill, last Thursday. By the law of 1890 the treasurer was authorized to purchase silver bullion at market price and issue silver certificates to the full amount of its cost. This bill now calls for the coinage of this bullion, placing it back into the vaults, and issuing certificates to the amount of its coined value. This incurs needless expense of coining the silver. It would have been just as well and much cheaper to have authorized the issue of two dollars of certificates to each dollar of bullion. The effect would be the same

EGGS FOR HATCHING.

How to Obtain a First Class Hatch-Rules For Mating-Egg Testing. To have good eggs for hatching, either

in an incubator or under a hen, we must first of all have good, healthy, vigorous stock to produce the eggs. One very vital point is to see that too many cocks are not kept. Especially is this the case where all the fowlsrun together. If each cock has his own yard and hens, it is not so important.

Exact rules cannot be given, but approximately the following from Hoyd's "Poultry Book" may be considered about the right mating: Leghorns, Spanish, Hamburg and Game, 18 to 20 hens with one good cock not less than 15 months old, with best results. Plymouth Rocks, 10 hens with one cock. All the large, heavy breeds, including Brahmas and all the Cochin family, five to eight hens with one cock.

Some claim there is nothing as good for a nest as clean, sharp sand, for two reasons-it soon cleans lice off of hens, and eggs can never get dirty on clean sand. Nothing can come off the sand that will stop the pores of the shell.

Eggs for hatching should always be carefully gathered twice a day, and as fast as laid in cold weather; should be kept in a cool place where it is neither dry nor damp-that is, damp enough to mildew or mold anything. A good cellar where the temperature is about 50 or 60 is a good place. The proper position in which to place them while being held till wanted for setting is a disputed point. Some say large end up, some small end up, others on side and turn over daily. If they are not kept more than a couple of weeks, it will make but little difference which end is up.

Before the eggs are put in the incubator or under the hen they should be examined with an egg tester. All that can be done at this test is to see if the eggs are fresh and perfect. Nothing whatever can be told about the fertility, but all eggs that are not perfect shells and contents should be thrown out-any that have small specks of any kind visible inside, all with shells that appear cracked, all that have the yolk adhering to the shells, those that have thin, rough shells, especially the large end. Use nothing but perfectly shaped, clean shells.

Incubator manufacturers have egg testers for sale, but if you do not wish to buy one a good one may be made as follows: Have a darkened room. In the curtain, blanket or whatever the room is darkened with have a hole through which light can come into the room. Have a cigar box with two egg shaped holes opposite each other. Over one tack a piece of leather or felt, in which is an egg shaped hole just large enough to fit nicely around an egg when placed in it. Hold the egg in this and before the hole in the curtain, look through the opposite hole of the box, and you can detect any shortcomings in the egg that you did not observe by daylight. The same work can be done at night if a good lamp is used in connection with the box tester.

A Big Crop of Potatoes.

Some few practical farmers well understand that a much larger crop of potatoes can be obtained when the manure is of a long, stringy character than when well rotted manure or special fertilizers are introduced, but this knowledge has not yet spread to the vegetable grower, critically so called, according to Meehans' Monthly, which says: Yet it is amazing what an enormous crop of potatoes may be produced by the use of such material. If any of our amateur readers who want to excite the envy of their neighbors by growing superior crops will cover the potato sets with mere straw or some other kind of litter several inches in depth before the earth is drawn over them, they will certainly have this personal satisfaction. Draw out a trench, say, four inches in depth, put the potato sets about a foot apart, cover the whole of this trench in four inches deep with straw or litter and then draw three or four inches of earth over it, and the product will be a surprise. Not only are the potatoes large and produced in enormous quantities under this treatment, but the skins of the potato themselves have a bright and clear look, which makes them an object of beauty as well as a desirable crop from the purely vegetable point of view.

ABOUT UNDERDRAINING.

Where It Is Most Beneficial-How and When to Ditch.

Low, level and heavy lands, or land that is cut up with swamps and marshes, also rolling land with streaks or hollows between the ridges, should be underdrained. Money expended in ditching such lands, if the work be properly done, will be speedily repaid with in-

terest In ditching the first thing to look after is a good autlet, for no matter how well the rest of the work be done if there is not a good outlet it is all a failure, says a writer in Farm, Field and Fireside, authority for the following:

When buying tile, one should first consider how many branches on his farm will enter into the main ditch. then buy tile large enough to carry all the water as fast as it gets to it. When planning for underdraining a farm, arrange the main ditch so as to take in the lowest hollows and where the lay of the land will take the longest string of tile. Try to have the main ditch about three feet deep in the shallowest places. This will give a good fall to the branches. The object in underdraining is to loosen heavy, soggy soil

and to remove surface water as soon as possible. To do this care should be taken to get the ditch about the right depth. For branch drains I think from two to three feet is the proper depth. In any ditch the fall should not be evenly distributed throughout its entire length. It should not have more fall than necessary part of the way and the rest be on a level. Neither should part of the tile be full of water and the rest

pidity.

the beans.

animal and vegetable food.

Growing Navy Beans.

Prairie Farmer suggests, if you are

be empty. In case of quicksand in the bottom boards should be placed under the tile to prevent their settling. for if the tile are not kept even a large percentage of their capacity will be lost. In making turns never turn square, but always on a circle large enough so you can use common tile for making the turn. For large tile use a larger circle than for small. Never have a branch form a right angle with the main ditch, but let it curve or angle toward the outlet. In running a ditch to a low sag I think it does better work to go through the sag

and end in the opposite bank. Now about the best time to ditch. I put in the main ditch whenever I can best spare time and when it digs easiest. After this is done I choose a field of sod nearest the outlet of the main ditch from which I am going to take a succession of crops and drain the field in the fall. ditching it so that the low and high ground will be ready to work at the same time in the spring. By doing it in the fall the freezing and thawing of the winter and spring loosens the soil and opens the pores through the ground; consequently the ditch is in better working order and the ground in better shape for use in the spring than if I waited until spring before ditching.

Shipping Live Poultry. Here are a few general rules in regard to shipping live poultry from Lloyd's Poultry Book that are applicable to all

markets: Shippers should see that the coops are in good condition before using, so that they are not liable to come apart in transit, as they are roughly handled sometimes.

The coops should also be high enough same land and the same cultivation the to allow whatever kind of poultry is crop should be nearly as large as the wheat yield would be, and one has but shipped room to stand up. Low coops should not be used, as it is not only to compare the market reports to see cruel, but a great deal of poultry is los nich is the more profitable. every year by suffocation. Coops should not be overcrowded. **Pointers For Potato Growers.** In shipping hens and roosters they American Gardening furnishes these should be kept separate. Nothing deprerules: 1. Select only choice seed. 2. Do ciates the value of a fine coop of hens as not allow seed to sprout before planting. much as to have a number of old cocks 3. Cut seed so as not to put more than among them. Shippers often wonder four eyes in a hill. 4. Plow deep, and why they do not get the highest market do it well. 5. Cultivate your ground price for their stock. In most cases this thoroughly before planting. 6. As soon is the reason. Good stock always comas the potatoes are up so you can see the mands a quick sale at best prices. rows cover them well. SERVIA'S STOCK TROUBLE.

In a Muddle Over Who Shall Rule, While Milan Poses as a Patriot.

> The frugal Servians just now are torn by conflicting emotions. King Alexander and his erratic, disreputable father have managed between them to alienate what little love had been left in Servia for the Obrenovitsch dynasty, and if the Karageorgevitch pretenders were reasonably respectable and fairly disinterested they could obtain the throne without much difficulty. But Prince Arsene and Prince Peter are, in their way, not much to be preferred to ex-King Milan and his son. They are ambitions, autocratic, extrava gant and heavily in debt, and their morals will not bear severe scrutiny. They are surrounded by impecunious

Russian nobles and loose people of both sexes, all of whom will have to be liberally provided for in the event of the Karageorgevitch restoration out of the national treasury, and, to crown their disadvantages in the eves of the Servian farmers, they claim the retrocession to them of the enormous estates which were formerly the private property of their house, and which were confiscated to the state when the head of the Karageorgevitch family was assassinated and all his relatives were kicked out of the country. On the whole, therefore, Arsene and

Peter would be more expensive than Milan and Alexander. As the question is mainly one of money, the latter will in all probability remain in Belgrade, the establishment of a republic being entire ly out of the question. Meanwhile Milan poses as a patriot. He pines for Paris and its supreme delights, which it is impossible to enjoy in semibarbarous Belgrade, but a stern sense of duty keeps him at his son's side. Privately he is haggling with the ministers as to the sum which shall be paid him to clear out. He has hinted that if his price be not paid he will have himself appointed generalissimo and inspector of the army and settle permanently in the country. The ap-palling prospect thus opened is likely materially to hasten a settlement.-Belgrade Letter.

LOST IN ALASKAN WILDS.

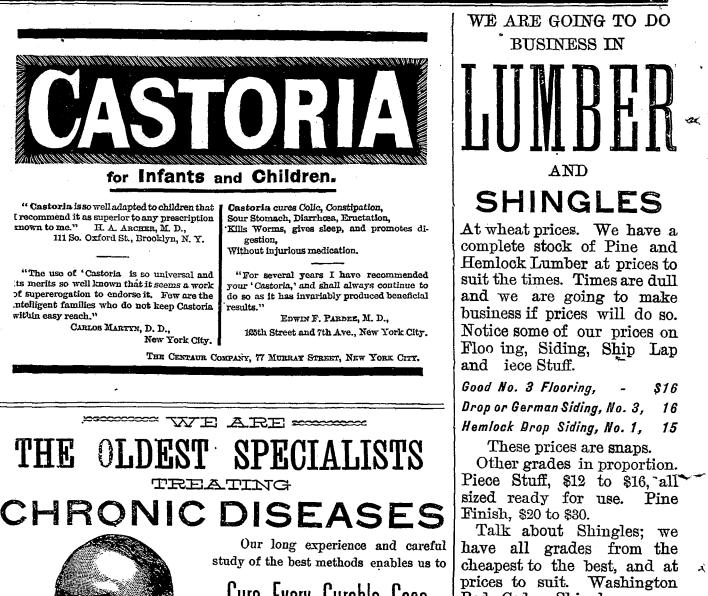

An Explorer's Disregard of His Company ions' Advice Costs Him His Life. Death from either starvation or exposure in the biting winter weather of south-

western Alaska or perhaps suicide as the only means of avoiding the horrible fate in store for himself-such is the fate of M. Gross, a Canadian surveyor. Gross, with four companions, left Fort Wrangle on the 29th of January, the party intending to hunt, fish and perhaps do some prospecting. When they got to

Portage bay, they made permanent camp. It was early morning, and Gross told his companions that he intended to dive a little into the interior and would be back

before night. He was cautioned against going out alone, as it was known that he was not familiar with the surrounding country, and it was feared that he might get lost in the woods. He disregarded the advice of his companions, however, and at 6 o'clock the same evening the other members of the party heard a slut in the brush some few miles distant. They hailed and by other signs tried to guide Gross back to camp, but were not successful. The whole of the next day was spent in the search, which had to be finally given up.

Gross is said to have been from Victoria. He was last year a member of the Canadian survey party sent up to Alaska to officially determine the territory's boundary line.-Seattle Pres

Smut In Wheat.

The Nebraska station recommends the blue vitricl treatment for smut in wheat. Mix 4 ounces of blue vitriol (copper sulphate) and fill a barrel two-thirds full of the solution. Dip the wheat thoroughly, so that all the wheat grains are well soaked-10 minutes probably will suffice. Use a gunny sack or some other old sack and arrange a drip shelf so that the fluid drip will run back into the barrel. Renew the strength of the solution and the quantity from time to time, so as to do the work with thoroughness. The smut may not all leave the first year, but two or three years of persistent effort will cause it to succumb and be practically annihilated. Hot water and other remedies have been recommended, but an experience of nine years where this treatment of seed was persisted in by the best farmers shows a uniformity of good results, and that the above formula is an excellent remedy.

Difference In Effect.

"What difference in effect do you find between the fertilizer and manure?" "Certain plants, like radishes, grow straight and better with fertilizers. The fertilizers are warmer than manurethat is, in wet or backward springs. The manure keeps the ground cold, so the seeds will not start so well. Fertilizers also hasten maturity, pushing along all crops by several days ahead of those on stable manure. We always broadcast all our fertilizer and harrow it in. Only one application is made in the spring,"

says The Rural New Yorker.

Agricultural Notes.

Set out as early as practicable the cabbage wintered in the cold frame. A little special fertilizer will start the plants into vigorous growth.

Buyers of sugar beets in Nevada are offering to contract for beets that run in excess of 10 per cent of saccharine matter at \$4 a ton and less than that \$3 a ton. They claim that the sagebrush growing soil shows an average productiveness of 24 4-5 tons to the acre.

There is a bill before the New York legislature to appropriate \$20,000 to establish an agricultural experiment siation on Long Island.

There are now 54 agricultural experiment stations, occupying 500 persons in them, receiving more than \$1,000,000 yearly from the government.

It is estimated that the amount of new land brought into cultivation in this country will hereafter be about balanced by the amount abandoned or otherwise diverted from agriculture.

The carelessness of farmers in baling hay for export shipment causes great an-

.

In Selecting Varieties Consider Soil, Cli-

"It is simple enough to say that the best seed possible should be used for the corn crop, but this includes more than we realize until we have experimented a few years," says a writer in The American Cultivator. He says: "As to vari-

sty, we must first decide upon seeds. We have many sorts of corn scattered over the whole country from one end to the other, and every farmer knows that no one variety will do for all sections. The Golden Beauty, Pride of the North, Mammoth Chester and many others have their advocates, but in listening to their praises we must take into consideration the soil and climate where they are grown successfully.

"The early varieties of corn do not generally do as well in any section as the late varieties, and a variety that is early for one locality may not be for another. The most prolific corn crops are obtained from fields sown with varieties that take up nearly the whole growing season to

mature. This is a rule that one can follow with fair safety. But, on the other hand, there are places where intense summer droughts occur and nearly the whole corn crop is checked in its growth by it. A variety of corn should be selected for such a place that would be out of blossom before the dry spell arrived. Sometimes a very late variety will tide over the heavy drought and come in blossom and maturity afterward late in the au-

"The variety must also be considered from the standpoint of general average production per acre. We must select those that give a heavy yield to the acre

when shelled and grains that are firm and heavy. Soft corn is not as good as the flint grain kind, and though the former may yield more to the acre it will not be so valuable. There are also varieties of corn that have firm, heavy grains and a very heavy yield when on the cob, but when it is shelled the amount is comparatively small. Corn that is all cob is not desired for any cornfield.

"After the right variety for our field is selected we must follow the same progressive methods year by year in selectng the best ears for seed. Many still believe in gathering their seeds from the general field, going through the rows and gathering the largest and finest ears. If one stops to calculate the cost, he will find that it is no more expensive to have a separate plat of ground for raising seed corn. Seed ears raised on this separate ground will be far superior to any in the field. Better culture can be given to it, and the ears will be larger, and the grains better developed. There will be no crowding, and every ear will have a chance to do its best. Besides this, we are apt in this way to avoid contamination with ears infested with corn

smut."

mate and Also Average Production.

\$22 to \$25 an acre in addition. Men who have had the largest experience in growing alfalfa think it should not be sown too early, as the young plant is somewhat tender and liable to be injured by frost. They all advise covering the seed an inch or two deep. It is told by a Kansas farmer that Mammoth Pearl, Snowflake, Mountain Rose, Peachblow, White Neshannocks and Dakota Reds are of fine quality and adapted to irrigation.

While the sugar beet is attracting so much attention the fact that sorghum is a good sugar producing plant is being forgotten.

The alfalfa plant is gradually invading Kansas.

Where peppers are grown for market use, to be used in the natural state or for mangoes, the Ruby King has given the best satisfaction under irrigation. The farmers of western Nebraska are going daft on alfalfa culture, and the season of 1894 will witness a phenomenal increase in the acreage of the crop. In growing rape the aim should be to secure a thick growth of medium plants. Thinning will make a heavier yield, but there will be more waste because of the heavy stems.

A smooth meadow makes easy mowing. It is a good plan to roll the land as early as possible in spring, using a heavy roller and carrying a box upon it in which to put all surface stones. It pays better to pick these up than to leave them to break your mower knives

on.

Comb Honey and Swarming.

The query, "Can we secure more surplus comb honey by allowing one prime swarm?" was asked at a meeting of beekeepers. Here are the replies as reported by the American Bee Journal: Mr. Hineş-All the time that it takes to build a new set of brood combs is lost, and I would rather keep them at work in the sections.

Mr. Benton-I would rather my bees wouldn't swarm, for in so doing the comb honey crop is decreased in my location.

Mr. Kimble-I want one swarm from each colony, because then I will have two colonies for the latter part of the clover crop and two colonies to gather the fall crop, and the two will gather

more than the one. Frank Coverdale - I can't prevent swarming, and so I have to do the best I can with swarms. My method is to run all the working force into the new swarm for 14 days after hiving, then double the increase for the fall crop, and much nice comb honey will likely be the result. Mr. Merritt-New swarms build much

Feeding Wheat to Stock.

In a recent crop report the government

made an announcement of widespread

interest. It was that the returns of the

correspondents of the department

through the great wheat surplus states

indicate a new factor in the consump-

tion of wheat-the feeding of the same

to hogs and other stock-a fact due, as

declared, to the unprecedentedly low

prices, the claim being made that this

mode of disposing of the cereal is profit-

able as compared with marketing it for human food. The significance of this is

enhanced by the official estimate that

the indicated stock of wheat in farmers'

hands on March 1 last was 21,000,000

bushels less than it was estimated they
