**Not to be Trifled With.**  
Will people ever learn that a "cold" is an accident to be dreaded, and that when it occurs treatment should be promptly applied? There is no knowing where the trouble will end, and while complete recovery is the rule, the exceptions are terribly frequent, and thousands upon thousands of fatal illnesses occur every year, ushered in by a little injudicious exposure and seemingly trifling symptoms. Beyond this, there are today countless invalids who can trace their complaints to "colds," which at the time of occurrence gave no concern, and were therefore neglected. When troubled with a cold, use Chamberlain's Cough Remedy. It is prompt and effectual. 25 and 50 cent bottles for sale by Bar-more, the druggist.

FARMING AND GARDENING

PREPARATION OF THE SOIL. Thorough Cultivation Without Expensive Implements—Domestic Harrows.

One of the essentials to successful farming is the thorough cultivation of the soil preparatory to seeding, very essential for wheat. There exists a general impression that thorough cultivation involves the use of many expensive implements, but an Illinois farmer in a letter to Country Gentleman gives the assurance that these are not indispensable.

He writes: In my variety the implements I most rely upon are a heavy and a straight tooth harrow, one heavy and one light drag, altogether not costing more than one good plow and two hay forks. The straight tooth harrow is made of iron plates, the width of 3 by 3, seasoned oak, hickory or ash. The fore ends are cut to a slope that will give the right spread, a hitch block placed between them with a three-

inch bar across the top. The straight tooth harrow is made of iron plates, the width of 3 by 3, seasoned oak, hickory or ash. The fore ends are cut to a slope that will give the right spread, a hitch block placed between them with a three-
