When a Child Turns on its Parent

HOW TO PREVENT FIRES

1. Matches — Be sure your match is out. Break it in two before you throw it away.
2. Tobacco — Be sure that pipe stems and cigar or cigarette stubs are dead before throwing them away. Never throw them into brush, leaves or needles.
3. Making Camp — Before building a fire scrape away all inflammable material from a spot 5 feet in diameter. Dig a hole in the center and in it build your camp fire. Keep your fire small. Never build it against trees or logs or near brush.
4. Breaking Camp — Never break camp until your fire is out—dead out.
5. Brush Burning — Never burn slash or brush in windy weather or while there is the slightest danger that the fire will get away.

One tree will make a million matches,—and one of the million matches can turn on its parent and destroy it, and a million more giants of the forest with it.

A three-fold loss results:

- (1) Property loss.
- (2) State expense for fighting fires, \$366,193.33.
- (3) An ideal vacation land denuded of its attractions; for timber fires take the beauty from the woodlands, and cause partial drying up of lakes and streams.

Care—vigilance!—on the part of every tourist and camper, both from Michigan and from without our state,—will stop this loss. Remember that northern forests burn easily. The pine needle floor picks up a spark like tinder. Practice the Prevention Rules shown here, which all trained woodsmen use. Additional copies will be sent free on request to this office. Your friends, and travelers, will be glad to have them.
